Abstract (en)
[origin: WO2015032564A1] The invention relates to a grinding machine housing device comprising at least one housing element (12) which at least partially defines a drive axle plane and an output axle plane (14), and comprising at least one energy accumulator receiving interface (16) which is arranged on the housing element (12) and designed to receive, in a releasable manner, at least one energy accumulator device (18). Said energy accumulator receiving interface (16) comprises at least one receiving guide element (20). According to the invention, the receiving guide element (20) has a main guide axis (22) which is at least essentially transversal to the drive axle plane and the output axle plane (14).
