Abstract (en)

[origin: WO2015067398A2] The invention relates to a steam power plant with a liquid/steam circuit (8) including a steam generator (1) for converting a liquid into steam, a steam turbine (2) and a condenser (6) for converting the steam into the liquid, a generator (7) and a liquid cooling system for the generator (15), wherein the liquid cooling system (15) comprises a connection to the liquid/steam circuit (8) via a bypass-like path of flow (9) through which the liquid from the liquid/steam circuit (8) can be branched out to the liquid cooling system (15) and can be led back from the liquid cooling system (15) to the liquid/steam circuit (8).
