Abstract (en)
[origin: WO2015032843A2] The invention relates to an aiming device (100), in particular of a handgun, comprising at least one active aiming means (3) and at least one passive aiming means (50), wherein the passive and active aiming means (3, 50), which are independent of each other, can be adjusted in relation to the hand weapon by means of a common adjustment device (4). The common adjustment device (4) is mechanically connected to both the active and the passive aiming means (3, 50). An angle sensor (13.1) is integrated for the common adjustment. The one or more active aiming means (3) are combined into a laser combination (3) in the form of a laser block.
