Abstract (en)
[origin: WO2015032708A2] The present invention relates to a system for transmitting information when a motor vehicle driving in the wrong direction has been detected, corresponding transmitting and receiving devices and corresponding transmitting and receiving methods. The system comprises a transmitting device (10) and a receiving device (20). The transmitting device (10) comprises a light source (11) which is designed to emit a light-coded signal (22), and a detection device (30) which is designed to detect a motor vehicle (1, 2, 3) that is driving in the wrong direction. The transmitting device (10) is designed to emit the light-coded signal (22) by means of the light source (11) as soon as the detection unit (30) has detected a motor vehicle (1, 2, 3) that is driving in the wrong direction, the light-coded signal (22) containing information about the motor vehicle (1, 2, 3) driving in the wrong direction. The receiving device (20) is designed to scan images row by row and/or column by column and to receive a light-coded signal (22) entirely within an image and evaluate it.
