Abstract (en)

[origin: WO2015028101A1] The present invention relates to a camera (1) suitable for mounting on a display device (2) in particular a TV, for imaging a user located in front of a display (3) of the display device (2), the camera (1) comprising an image acquiring means (4), a housing including the image acquiring means (4); and a mounting means for detachably mounting the housing to the display device (2). In the camera (1) of the present invention the housing has a main section (5) and a head section (6) which is supported by the main section (5) movably between a collapsed state and an expanded state; the mounting means is configured to detachably attach the main section (5) at a designated location on a back cover (7) of the display device (2) via a respective mounting means formed on the display device (2); the image acquiring means (4) is disposed on a front surface (8) of the head section (6), which opposes the user. In the collapsed state, the image acquiring means (4) is completely obscured by the display device (2), and in the expanded state, a field-of-view of the image acquiring means (4) is unobstructed by the display device (2).
