Abstract (en)

[origin: KR20150026775A] The present invention relates to a local area wireless communication control method and to a supporting apparatus thereof. According to various embodiments, an electronic device includes: a local area network communication which transmits and receives a local area network communication signal with at least one different communication device; and a control module which controls the on/off of a scan operation which stands by the reception of the signal of at least one second communication device in the case of pairing-connecting a first communication device through the local area network communication module.
