Abstract (en)

[origin: WO2015028764A1] The invention relates to a method for producing chewing-gum compositions containing xylitol introduced in the form of a powder as polyol, by introducing into said compositions at least one anti-caking agent, preferably having a specific surface BET of at least 200 m<sup>2</sup>/g. The hardness of the chewing-gum thus obtained is increased, such an increase being desirable, for example, for preventing the deformation of centres to be sugar-coated in the sugar-coating turbines or improving the stick-packaging rates. The anti-caking agent is previously mixed with the powdery xylitol. The invention further relates to the powdery composition of xylitol and anti-caking agent.
