Abstract (en)
[origin: WO2015044264A1] The invention relates to a seating/reclining furniture comprising a seat part (10), a backrest part (12), and a cantilever support structure (14). A foot support device (18) is provided which comprises a support frame (20) and a first and a second foot support portion (22, 24), and the first foot support portion (22) is pivotally mounted on the support frame and can be adjusted between a storage position and a working position. The second foot support portion (24) can be adjusted linearly relative to the first foot support portion between a retracted position and an extended position. The foot support device comprises a working device (26) which causes the first foot support portion to be pivoted relative to the support frame by means of a first fitting (36) and the second foot support portion to be moved relative to the first foot support portion by means of a second fitting (38) independently of a change of the relative position of the backrest and the seat part.
