Abstract (en)

[origin: WO2015036111A1] The invention relates to a device for signaling movements of a musculoskeletal system of a human being, said device having a) at least one sensor (1) for detecting a movement, b) at least one carrier element (2) for at least one sensor (1) for detecting a movement, c) means (3) for securing the at least one carrier element (2) to the musculoskeletal system of a human being, d) a signaling device for signaling sensor values of the at least one sensor (1) for detecting a movement.
