Abstract (en)

[origin: WO2015036260A1] The invention relates to a device for aquatics designed to be fastened on a boat, which comprises: a member (1) for generating an electric current when it interacts with a first fluid; a support (2) designed to be mounted on the boat, in particular on the hull of the boat; an arm (3) extending from the electric current generating member (1) and mounted to the support (2) by a first articulation (4) to make it possible to vary said electric current generating member (1) between a first position in the first fluid and a second position outside the first fluid; and a second articulation (5) allowing a movement of the electric current generating member (1) relative to at least one part (3a) of the arm (3) so as to allow said electric current generating member (1) to be oriented relative to the first fluid.
