Abstract (en)  
[origin: WO2015032949A1] A light module comprising: - a support (10) comprising at least one first so-called separating surface (101), - at least one organic light emitting diode (20) comprising a first light-emitting part (200), means for attaching the diode to the support and means for electrically connecting the diode, the means for attaching the diode and the means for electrically connecting the diode being carried by a part of said diode, referred to as the connecting part (210). Also, the separating surface (101) of the support delimits a light-diffusing area into which the first light-emitting part (200) of the diode extends, and separates this light-diffusing area from a masked area, into which the connecting part (210) of the diode extends, such that said connecting part is concealed by the separating surface (101) of the support (10).
