Abstract (en)
[origin: WO2015036425A1] The invention relates to a lighting module for a motor vehicle projector, comprising first (1) and second (2) visible radiation sources that can emit laser radiation (L1, L2) towards a wavelength conversion device (3) which can reemit visible radiation (16) towards an optical projection system (4) in order to produce a light beam (15), characterised in that the module comprises a single wavelength conversion device (3) for all laser radiation (L1, L2) and the first visible radiation source (1) is static or quasi-static, comprising at least one first laser light source (9) cooperating with a single reflector (10).
