Abstract (en)

[origin: WO2015036201A1] In order to reduce significantly the effort involved in the logistics and making safe of destructive charges (100) containing hollow charges, intended particularly for bomb disposal by remotely controlled detonation, the invention proposes that the destructive charge (100) should not be kept, i.e. stored and transported, as a ready-assembled charge, but instead all components that are not relevant to safety, such as the preferably tubular casing element (2) of the destructive charge (100), a hollow charge insert (5) and the cap (6) or cover (22) intended for receiving the detonator, should be stored and transported separately as a construction kit (1, 1'). The destructive charge (100) is then only assembled on site, together with the explosive (12) that is required for the hollow charge and is available at the site and together with the electrical detonator, on condition that the person in charge of bomb disposal operations authorizes their use for blowing up the bombs.
