Abstract (en)

[origin: WO2015010797A1] The application relates to a clock movement resonator comprising: • - a balance (10), • - a pinion (24) mounted coaxial and secured to the balance, • - at least one moving part (20) comprising a toothset in mesh with the pinion, and • - a spring member (26) exerting a return force on the moving part, the spring member not being a spiral spring. The application also relates to a clock movement resonator comprising • - a pinion (24), • - at least one moving part (20) comprising a toothset in mesh with the pinion, and • - a spring member (26) exerting a return force on the moving part (20), in which the spring member is not a spiral spring, the moving part comprising an inertial mass and acting as a balance.
