Abstract (en)
[origin: EP3045591A1] A cutting edge member (204) for a work tool (200) configured to be detachably fastened to a base edge member (202) using a bolt (300) and a sleeve member (400) is provided. The cutting edge member (204) defines holes (230) that includes a lower portion (234) proximate to a bottom surface (217) of the cutting edge member (204) and an upper portion (232) distal to the bottom surface (217). The lower portion (234) receives a head (402) of the sleeve member (400) therein. The upper portion (232) partly receives an elongate portion (403) of the sleeve member (400) that extends into a corresponding hole (220) defined in the base edge member (202) and is in a threaded engagement with the bolt (300). A head (302) of the bolt (300) and a top surface (216) of the base edge member (202) are substantially flush and co-planar relative to each other.
