Abstract (en)
The present invention relates to an air conditioner having a door for closing a hole for discharging air. The air conditioner according to an embodiment of the present invention includes, a body rear panel (150) forming an upper rear external appearance and having an inlet (151a) for admitting air, a body front panel (190) coupled to the body rear panel (150), forming a front external appearance, and having an outlet (190a) for discharging air, a blowing module (140) for discharging air to the outlet (190a), a guide panel (170) disposed between the blowing module (140) and the body front panel (190) and having a guide hole (170a) for guiding air from the blowing module (140) to the outlet (190a), and a door unit (180) rotatably coupled to the guide panel (170) for closing the outlet (190a) and the guide hole (170a).
