Abstract (en)
[origin: WO2015039156A1] The invention relates to a ski (1) having a sliding surface (1') and a ski upper face (1'') opposite the the sliding surface (1'), wherein a climbing aid (2) can be attached to the sliding surface (1') and the ski (1) has a continuous opening (3') in an area located before a contact surface (5'), which extends from the sliding surface (1') to the ski upper face. According to the invention, a securing element (4) is arranged on the ski upper face (1''), which comprises at least one holding element (4') for the form-fitting connection to a corresponding counter element (6) of the climbing aid (2).
