Abstract (en)

[origin: WO2015036048A1] The invention relates to an operator control- and detector device comprising an actuating tappet (2) which is operatively connected to a spring element (3), said spring element (3) being mounted on a contactor plate (6). The invention is characterised in that a plurality of contact pads (7) is arranged between the contactor plate (6) and the spring element (3), said pads converting a different compressed position of the spring element (3) into different signals.
