Abstract (en)
The outer frame 4 has a plurality of outer frame throughhole 7, an operation board holding member 6 goes through the outer frame throughhole 7 and fixed to the outer frame 4. Thereby, it is possible to hold and fix the operation board 3 to the outer frame side surface 4a with a simple and inexpensive configuration. Accordingly, this makes it possible to reduce the space occupied by the operation board holding member 6 in the main body, and parts can be arranged efficiently within a limited space of the main body, thereby achieving a thinner size of the outer frame 4 in the induction-heating cooker.
