Abstract (en)  
[origin: WO2015044189A1] A process for producing a laminate structure (2), comprising the steps of: E1) providing a composition (6) comprising: i) gold (Au) particles in an amount within a range from 0.1% to 50% by weight; ii) remainder to 100% by weight of a polar protic organic solvent; iii) less than 5% by weight of water, where the percentages by weight, based in each case on the total mass of composition (6) add up to 100% by weight; E2) applying the composition (6) to a substrate (4) to obtain a precursor (12); E3) heating the precursor (12) to a temperature within a range from 25 to 200 °C to obtain the laminate structure (2).
