Abstract (en)

[origin: WO2015047685A2] An enclosed carton (10) for housing and dispensing a plurality of containers (12) has front and back panels (14, 15), side panels (16, 17), and top and bottom end panels (18, 19) connected to the front and back panels and the side panels to form a closed structure wherein containers are extendible height-wise between the side panels in at least one row between the front and back panels and are stackable between the bottom and top end panels. The front panel has a plurality of access panels (31, 32, 33, 34) removably connected to the front panel and to each other such that, with said carton positioned on the bottom end panel and the containers oriented horizontally, the access panels can be removed in succession to provide access to the containers.
