Abstract (en)

[origin: WO2015040199A1] A device for treating strand-shaped textile fabric in the form of an endless fabric strand, which is set in circulation at least during part of the treatment, has a closable treatment container (1) and a transport nozzle arrangement (14) which is able to be subjected to a transport medium flow. The transport nozzle arrangement contains a transport nozzle (40) having an angular, rectilinearly delimited nozzle inlet opening (47) and a cross-sectionally angular outlet part (48), having correspondingly adapted dimensions, for the fabric strand, between which a nozzle gap for the transport medium is delimited. The nozzle gap (52) is settable and delimited all around by straight nozzle elements (46) which have a substantially part-cylindrical cross-sectional shape.
