Abstract (en)

[origin: WO2015042716A1] This invention relates to a piece of equipment for forming surfaces comprising a blade including an arm; and an attachment structure having a proximal end connected to said blade and a distal end configured to be attached to a mobile unit. It further relates to a piece of equipment for forming surfaces comprising a blade including an arm; and at least one lateral wing pivotably connected to one end of the main section, whereby said at least one lateral wing is configurable in a folded configuration and at least one folded position. The forming equipment may include a knife secured to the arm close to the lower surface.
