Abstract (en)
[origin: CN203783492U] The utility model discloses a conveying device for a drill pipe of a deep hole drill device. The drill device is used for manufacturing a deep hole drill. The conveying device comprises at least one drill pipe support which is perpendicularly arranged on an operation flat surface of the drill device and is provided with an opening section, wherein the drill pipe can be placed in the drill pipe support or taken out of the drill pipe support through the opening section. The conveying device is characterized in that the drill pipe support is provided with a guide part, a conveying space with one side limited by the guide part and the other side limited by the drill pipe support is formed in the area of the opening section through the guide part, the conveying device comprises at least one clamping part for clamping the drill pipe, the clamping part can be horizontally moved, and the drill pipe can be moved in the area of the conveying space through the clamping part.
