Abstract (en)

[origin: WO2015044240A1] The invention relates to a device for introducing a freezable liquid into the exhaust gas system of a motor vehicle. The device has a tank (1) for receiving the freezable liquid and a sensor (7) for determining the concentration and/or the fill state of the freezable liquid in the tank. Furthermore, a dome-shaped ice protector (2) is provided for protecting the sensor part (8, 9, 10, 11) which can be found in the tank. The ice protector is designed as an integral part together with the sensor base or the tank base, and the dome of the ice protector has a substantially completely open upper face. In this manner, the functional reliability of the device is increased.
