Abstract (en)
[origin: WO2015040231A1] The invention relates to a connection terminal (100) for the electrically contacting connection of a conductor (126) to a current bar (110) received on a holder (108), comprising a clamping spring (101) for applying a clamping force and a pivotable clamping lever (102) for clamping the conductor (126). The clamping spring (101) has a first leg (136) and at least a second leg (137) and is coupled with the first leg (136) in an articulated manner to the clamping lever (102) and with the second leg (137) in an articulated manner to an auxiliary lever (104). The clamping lever (102) and the auxiliary lever (104) are pivotably arranged on the holder (108).
