Abstract (en)

[origin: EP3050458A1] The present invention relates to a vacuum device for removing parasites (nits, lice, etc.) from hair, which enables the effective and fast removal of any type of parasite from hair, all in a clean and innocuous manner for the patient, preventing said parasites from having to be manually removed, while preventing the hair from being suctioned and damaged. The vacuum device (1) basically comprises a hollow main body (10) having a mouth (11) for coupling to a conventional domestic vacuum cleaner (A) and at least one pair of combs (20, 30) arranged substantially parallel and facing each other, each having a plurality of bristles (21, 31) with a different inter-bristle space (E1, E2) for each comb (20, 30).
