Abstract (en)

[origin: EP3050474A1] The invention refers to a system for attaching, securing and relative rotation of a toilet seat and cover, by the incorporation of projections and/or longitudinal grooves in the body attaching the components-shaft that form an axis of rotation, and the complementary grooves and/or projections of the housing of the two rotating elements (cover and seat) attaching and securing the cover, the seat and the shaft-pieces that join them, without needing any other elements, thus saving materials and avoiding complex assembly.
