Abstract (en)

Disclosed is an insulating module (11) for mounting on the façade of an existing building (10). The insulating module (11) comprises an inner wall (1) including a transversal roof metal profile (2) and a transversal foundation metal profile (3) between which a number of intermediate metal profiles (5) extend. The insulating module (11) also comprises an outer wall (6) including a transversal roof metal profile (2) and a transversal foundation metal profile (3) between which a number of intermediate metal profiles (5) extend, and wherein an outside surface of the outer wall (6) is provided with façade cladding (12c, 12d). The inner wall (1) and the outer wall (6) are mutually fixed at the transversal metal roof profiles (2) and the transversal metal foundation profiles (3) so that a cavity (8) is formed between the inner wall (1) and the outer wall (6). A method for post-insulating an existing building (10) by means of one or more insulating modules (11) is also disclosed.
