Abstract (en)

[origin: WO2015051232A1] Provided is a luggage piece that can be coupled to a second luggage piece to be transported with the second luggage piece as a joined unit. The first luggage piece includes a housing defining an interior compartment that stores items to be transported within the luggage piece, and a coupling system. The coupling system includes a plurality of flaps that cooperate with one or more receivers provided to the second luggage piece to couple the second luggage piece to the luggage piece, and a first portion of a releasable fastener provided to an inward-facing surface of at least one of the flaps. A second portion of the releasable fastener is provided to an outward-facing surface of the luggage piece, and is cooperable with the first portion of the releasable fastener to couple the at least one of the flaps to the outward-facing surface of the luggage piece.
