Abstract (en)
[origin: WO2015048951A1] The present invention provides hair treatment compositions comprising – based in each case on the weight thereof – 0.0001% to 10% by weight of at least one oligopeptide having at least one Glu-Glu-Glu amino acid sequence, where the amino group may be free or protonated and the carboxyl groups may be free or deprotonated, and 0.0001% to 10% by weight of at least one proteolipid of the formula (I) in which R1 is a straight-chain hydrocarbyl radical having 8 to 22 carbon atoms, R2 is -(CH2)y-CH3 with y = 0 to 22, Y is -H or -OH, X- is a physiologically acceptable anion, Hy is an oligopeptide residue from keratin hydrolysate, and x has values from 0 to 22. In these compositions, proteolipids and oligopeptides have mutually enhancing positive effects on the hair and the hair follicle.
