Abstract (en)  
[origin: WO2015043767A1] The invention relates to an elevator system (100) having at least one elevator car (10) movable inside an elevator shaft (12), wherein a connecting means (11) is provided which has a first elevator-car-side end and a second end, the first end of the connecting means (11) being connected to a suspension (50) provided on the elevator car (10). The invention is characterized by a carrying device (40, 45, 30) which exerts a force on the suspension (50), said force counteracting a force exerted on the suspension (50) by the mass of the connecting means (11).
