Abstract (en)
[origin: WO2015049485A1] Flexible pipe body, an elongate tape for forming pipe body and a method of manufacturing pipe body are disclosed. The flexible pipe body comprises at least one layer of helically wound tape (300), adjacent windings in the layer of tape being interlocked by a first connector of a winding interconnected with a complementary further connector of an adjacent winding. The first and further connectors are provided by respective regions of at least one insert (320) embedded in, and projecting from, a body portion of the tape 300).
