Abstract (en)  
[origin: WO2015049093A1] The invention relates to a household refrigeration appliance (1) having an inner chamber (4) for receiving groceries, which inner chamber is defined by walls (5 to 7) of an interior container (3), wherein on opposing vertical walls (5, 6) of the interior container (3), receiving bars (12) are formed, to which a plate-like compartment divider (11) of the household refrigeration appliance (1) can be mounted. On at least one receiving bar (12) and/or on a rear wall (7) of the interior container (3), a first engagement element (23a, 24) is formed, which in the end position of the compartment divider (11) engages with the interior container (3) between an upper channel wall (29) as viewed from a vertical direction of the household refrigeration appliance (1), and a first lower channel wall (31), which are formed at an edge (27, 28, 41) of the compartment divider (11) forming a first sidewardly open edge channel (32). The invention further relates to a method for installing a compartment divider (11) in a household refrigeration appliance (1).
