Abstract (en)

[origin: WO2015049241A1] The invention relates to a domestic refrigeration appliance (1) having an interior space (2) which is designed to receive foodstuffs and is bounded by walls (4 to 8) of an interior container (3), wherein holding apparatuses (14) for at least one shelf (12, 13) are formed on vertical walls (4, 5, 6), wherein the holding apparatus (14) has a rail-like receiving element (15), which is arranged in the interior space, for a shelf (12, 13) which has at least one guide region (22, 23; 22', 23') for receiving the shelf (12, 13), wherein the guide region (22, 23; 22', 23') is formed on a base plate (21) of the receiving element (15), and a flat light-emission region (25) is formed on a flat region (24) of the base plate (21), which flat region is adjacent to the guide region (22, 23; 22', 23').
