Abstract (en)  
A 3-D printing apparatus including a base (110) and a printing head module (120) is provided. The base includes a first supplying platform (114), a printing bed (112) and a second supplying platform (116) disposed in order along a printing path (P1). The first supplying platform (114) and the second supplying platform (116) carry building powder respectively, the first supplying platform and the second supplying platform are alternately lifted to a printing-reference plane of the base for supplying the building powder to the printing bed (112). The printing head module (120) is movably disposed above the base and configured to move along a forward direction of the print path (P1) to transfer the building powder of the first supplying platform onto the printing bed, and move along a backward direction of the printing path to transfer building powder of the second supplying platform onto the printing bed to form bonded powder layers stacked together to form a 3-D object.
