Abstract (en)  
Pressurized container for dispensing a product, wherein the pressurized container has a tubular body with a movable piston which divides the space inside the tubular body into two chambers, wherein a first chamber of the two chambers is provided to be filled with the product and wherein a second chamber of the two chambers is provided to be filled with a gas under pressure, wherein the pressurized container further comprises a channel extending outside from the first chamber in order to dispense the product, which channel is provided with a valve which can be operated by a user and which channel is further provided with a flow regulator.
