Abstract (en)
The invention relates to a container for receiving, collecting and storing cases fired from a firearm. According to a first aspect of the invention, the container includes a support hinged with a first securing portion including a face having an adhesion element for attaching same to the surface of the arm, and a securing and braking system suitable for tilting, and a second mobile portion having a frame with an inlet and outlet for the support, as well as including a tubular cover connected at one end to the inlet and including an opening and closing system at the opposite end. According to a second aspect, the invention provides a removable container including a securing and anchoring system comprising two pivots with a central hole and a retaining catch, in which the container includes a frame having end attachments for coupling and uncoupling same in relation to the support.
