Abstract (en)  
[origin: US2016225553A1] A driver (200) for an electrical switch (100), which driver is adapted to move between two positions so as to make or break contact between a movable contact element and a stationary contact element, and which driver includes a top portion (210) that includes a mount element with two outside faces (212B, 213B) that face away from each other, each provided with first catch elements (214) for mounting a first type of control button on the driver. The mount element includes second catch elements (215) that are accessible in an internal region (R) that is situated between the outside faces, for mounting a second type of control button on the driver.
