Abstract (en)
[origin: US2016081681A1] A surgical instrument comprises a first member engageable with tissue of a substantially posterior portion of an incision relative to a body. A second member is engageable with tissue of a substantially anterior portion of the incision relative to the body. A third member is engageable with tissue of a substantially cephalad portion of the incision relative to the body. The members are disposable in a configuration to space the tissue to define an oblique surgical pathway relative to a bilateral axis of the body. Systems and methods are disclosed.
