Abstract (en)
[origin: WO2015052157A1] A vibrating machine (1; 11) is described, in particular for machines for separating bulk foodstuffs, comprising the following features: a drive (3) suitable for generating vibrations at a frequency and with an amplitude, transmission members (4) suitable for transmitting the vibrations generated by the drive to an external element, and, in particular, an amplifier (5) suitable for amplifying the vibrations generated by the drive (3). The drive comprises an electromagnetic drive and/or a piezo actuator.
