Abstract (en)

[origin: WO2015053757A1] A laser-engraveable patternable element can be used to provide a relief image for various types of printing including flexographic printing. This laser- engraveable patternable element has a one laser-engravable layer that comprises a thermoplastic elastomeric interpolymer alloy that comprises a non-crosslinked halogenated polymer, a partially crosslinked polyolefin, and a polyester. A relief image can be obtained by directly laser-engraving the noted element under suitable conditions.
