Abstract (en)
[origin: WO2015051936A1] The invention relates to a device for connecting sanitary fittings comprising: an installation box (1); one or more fastening members (11); at least one fitting block (2); and a water inlet (4) and a water outlet (6). The fitting block (2) has at least one connector (3) for connecting to the water inlet (4) and at least one connector (5) for connecting to the water outlet (6) and the fitting block (2) has connectors for functional parts. In said invention, the object of providing a device for connecting sanitary fittings in which the fitting block can be oriented independently of the installed position of the installation box is achieved in that the connection between the connector (3) and the water inlet (4) and between the connector (5) and the water outlet (6) is formed by flexible duct-like means (7). The flexible duct-like means (7) can be formed as hoses, flexible hoses or telescopic pipes.
