Abstract (en)

[origin: WO2015052130A1] The invention relates to a composite profile made of plastics, designed as a hollow profile with at least two reinforcing strips arranged in the interior, characterized in that the at least two reinforcing strips (1A, 1B) are formed at least partially of thermoplastic plastic with embedded continuous glass and/or mineral fibers and/or other reinforcing fibers, and at least one of the reinforcing strips (1A, 1B) has at least one angled section (5A, 5B) parallel to the longitudinal axis of the composite profile (10), wherein the distance (A) between the at least two reinforcing strips (1A, 1B) and the respective adjacent outer walls (11) of the composite profile (10) in the region of the non-angled section corresponds to 0.1 to 3 times the wall thickness (D) of the outer wall (11). The invention also relates to a reinforcing strip for a composite profile and to a method for producing a composite profile.
