Abstract (en)
[origin: WO2015052087A1] The invention relates to a method for producing an organic light-emitting diode, comprising the following steps: formation of a lower layer (20) representing a first electrode on a first face of a substrate (10); formation of an organic layer (30) above at least part of the lower layer (20); and formation of an upper layer (40) representing a second electrode, above at least part of the organic layer (30); characterised in that the method comprises the formation of a hole (100) that passes through the substrate (10), the lower layer (20), the organic layer (30) and the upper layer (40).
