Abstract (en)

[origin: WO2015090679A1] In order to protect data privacy in a video stream, a video stream (30) comprising a slice structure (37) is created. A video stream slice (31) comprising content (32) that is to be protected is identified. A slice (41) which is at least partially redundant in relation to the identified slice (31) is created. The content (32) to be protected in one of the two slices (31, 41) is encrypted. At least one measure for assuring data privacy is used on the content (32) to be protected in the other (41, 31) of the two slices.
