Abstract (en)

[origin: US2016236809A1] The invention relates to an object carrier comprising a two-dimensional array of receptacles for trays having n rows and m lanes, with n and m each being integers equal to or greater than 2. The object carrier includes a plurality of notch elements provided on one or two mutually parallel outer sides. The invention further relates to a packaging system comprising a packaging machine, a transport system, at least one processing unit, and several multi-row object carriers. Several stop systems are provided along the transport system and are configured to stop an individual object carrier in an intermittent mode at consecutive notch elements of the object carrier in order to have at least one row of trays be processed by the processing unit.
