Abstract (en)  
A pouch container and a pouch container packaging are provided, which effectively prevents oblique seals from turning back, thereby reducing the risk of leakage of the contents from the pouch container. The pouch container packaging A1 includes a pair of outer films 1 disposed on the front and the back side with a spout 3 sandwiched at the top. The outer films each have side edges, a bottom edge and oblique edges lying between the side edges and the bottom edge. A pair of gusset films 2 are disposed in a folded state between the outer films 1 and each have side edges and oblique edges. Side seals 43 are provided by joining the side edges of the outer films 1 to the side edges of the gusset films 2. A bottom seal 44 is provided by joining the outer films 1 along their bottom edges. Oblique seals 45 are provided by joining the oblique edges of the outer films 1 to the oblique edges of the gusset films 2. At least a portion of an inner edge 45a of each oblique seal 45 is curved.
