Abstract (en)  
The invention provides a light fixture (1) comprising a magnetically coupled housing member (2) and base member (12), the base member (12) and housing member (2) being configured for moveably arranging a mounting part (3) of the housing member (2) in the base member (12), such that the housing member is tiltable and rotatable with respect to the base member, the light fixture being provided with at least one spacer (29,30), the at least one spacer being provided for maintaining a predetermined distance between the housing member and base member, such that direct contact between the housing member and base member is prevented while the magnetic coupling between the housing member and base member remains active, and the at least one spacer being in a predetermined soft material enabling the tilting and rotating of the housing member with respect to the base member without scratching.
