Abstract (en)
[origin: EP3056832A1] In a known air conditioner, when the operation setting of the air conditioner is changed from a visiting destination or the like by a user using a terminal, another user in an air-conditioned space in which the air conditioner is provided may misunderstand the change as a malfunction of the air conditioner. A sound notification controller (sound notification unit) of an air conditioner is arranged such that, when an operation change instruction is supplied from a terminal different from a remote controller which is an accessory of the air conditioner (S1: Yes), the air conditioner notifies by a message that the operation change instruction is supplied from the terminal, in response to the operation change instruction supplied from the terminal (S3).
